TACTICAL ENVIRONMENTAL COMPONENTS - WATER ASSET RECOVERY

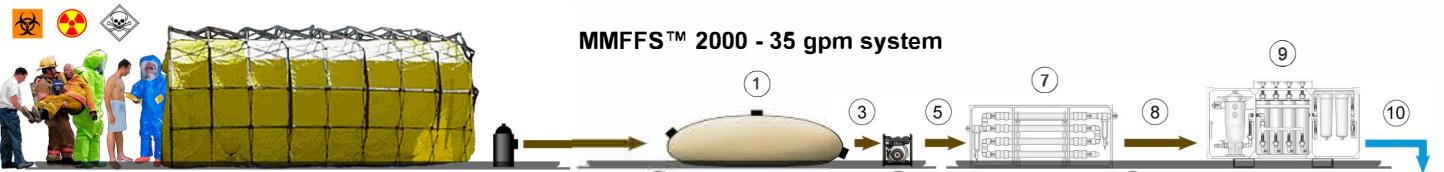

## Capture, Contain, Treat and Dispose of decontamination runoff and wastewater on-site.

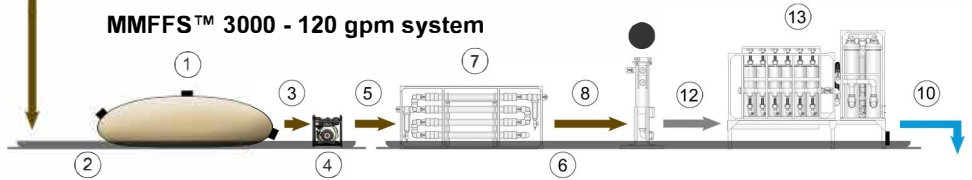

As stated in USEPA Chemical Safety Alert EPA 550-F-00-009 July 2000:

“Once any imminent threats to human health and life are addressed, first responders should immediately take all reasonable efforts to contain the contamination and avoid or mitigate environmental consequences.”

“First responders would not be protected under CERCLA from intentional contamination such as washing hazardous materials down the storm-sewer during a response action as an alternative to costly and problematic disposal or in order to avoid extra effort.”

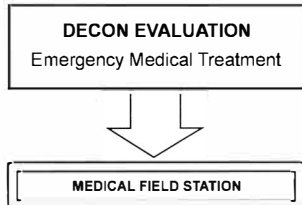

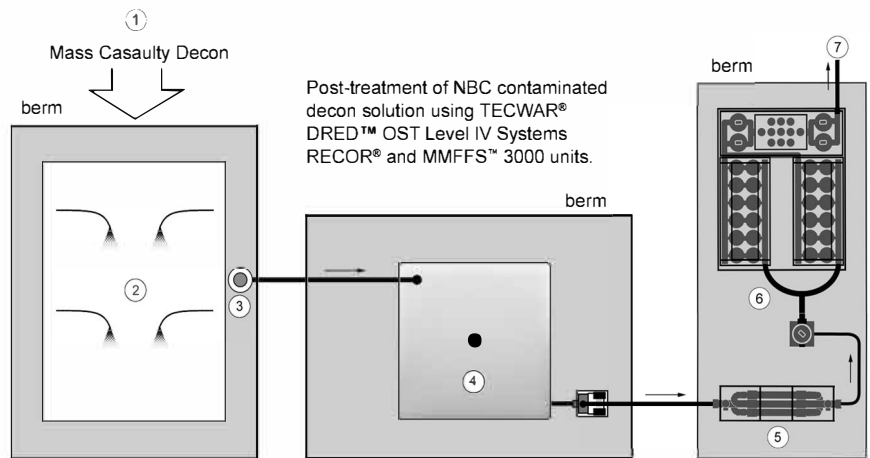

Typical decon station with decon runoff transferred to holding bladder

- 1K pillow tank with all fittings, vents and adaptors to accomodate 3/4", 1", 2" feed hose
- Berm for pillow tank
- 10' section of 2" hose
- Diesel powered 125 poly pump 2" inlet and outlet
- 10' section of hose
- Berm for DRED™ OST System
- RECOR® Reticulated Electro-Catalytic Oxidation/Reduction Pak
- 10' section of hose
- MMFFS™ 2K Multi-Functional Modular Fluid Filtration System™
- 30' section of hose - Acceptable discharge to the environment
- Tri-Flo bag filter
- 10' section of hose
- MMFFS™ 3K Multi-Functional Modular Fluid Filtration System™

### Adaptable to any Decontamination Corridor

- Decon Corridor**
1. Hot zone
  2. Decon station
  3. Sump pump

- DRED™ OST Level IV System:**
4. Decon runoff holding bladder (1K, 3K, 10K or 25K)
  5. RECOR® Reticulated Electro-Catalytic Oxidation/Reduction Pak
  6. MMFFS™ 3000 or 2000 Multi-Functional Modular Fluid Filtration System™
  7. Safe discharge to the environment

- ▶ **Portable**
- ▶ **Modular**
- ▶ **Scalable**

Adaptable to any Decontamination Corridor
